

GDSK BIZDIC Multilingual maps for a global GIS

GDSK BIZDIC is a powerful corporate multilingual dictionary that automates the translation of your geographic attributes and user interfaces provided by GDSK GEOPLATFORM. With GDSK BIZDIC a multinational GIS community is possible.

GDSK GEOPLATFORM gives you the power of GIS and spatial services availability worldwide, and such globalization is an unmatched opportunity to optimize and expand both your access to market and the productivity of your workgroups.

Combining GDSK GEOPLATFORM and Internet and Intranets you can offer spatial services everywhere, but when we are talking in global terms one of the first subjects that require attention is language, because the majority of world's population does not speak natively English, only one fourth of Internet audience talks it, and such number will be reduced as time pass and new markets open their doors. Also, if you are interested in optimizing corporate services, centralizing them and offering them for networking in an integrated interface you know that language is a limitation when your staff talks different languages.

Make your maps talk clearly

If you can talk to customers and public in general you will be able to catch their attention more easily, so your sales opportunities will increase, and if your workers can work in their mother language without idiomatic limitations their working capacity and productivity will be also increased exponentially.

But how to achieve this? Are you going to copy and translate each of your databases and geographic attributes to the chosen languages and then run a project to integrate them consistently in order to response reliable information to final users? And what about available applications' languages? Do they offer all the languages you need? Will you purchase different editions for different linguistic needs? Those are high cost options, and fortunately with GDSK BIZDIC you can avoid them.

Enjoy GDSK GEOPLATFORM with:

- ✓ GIS portals for web delivery
- ✓ High resolution printing
- ✓ Distributed and federated GIS
- ✓ Multimedia capabilities
- ✓ Web services
- ✓ Shared data
- ✓ Advanced integration schemas
- ✓ Corporate documentation access
- ✓ Standards support

Web portal based
Easy learning
Advanced vector feature edition
Friendly distributed catalog
Spatial metadata catalog
Maximum Precision

Now geodata talks your language

GDSK BIZDIC is a powerful corporate multilingual dictionary that automates the translation of your geographic attributes and user interfaces provided by GDSK GEOPLATFORM, without migrations or corporate database edition, making your spatial services available worldwide through GDSK GISPORTAL and fully comprehensible to every user.

These are the main characteristics of GDSK BIZDIC:

- GDSK GISPORTAL's menus translation.
- GDSK MAPVIEWER's quick user help.
- Automatic translation of terms included in database field name or field value.
- Availability of dictionary repository in English, Spanish, French, Italian and German.
- Extensible to additional languages and terminology.
- Helps you to normalize your corporate terminology.

With GDSK BIZDIC it doesn't matter anymore the linguistic preference of your workers and customers, nor does the language with which have your data been stored. It makes a global GIS possible. Anytime-**ANYWHERE**.
